

DISINFECTION IN A NON-TOXIC WAY

- **Pest***nix* launches new non-toxic disinfection for COVID-19 which is completely environmentally-sound, throughout the supply chain.
- This new preventive and control strategy using new technology is not only safer but also cheaper and suitable for learning institutions, homes, places of worship and all businesses including food production factories and restaurants.
- **It has no side defects on children or any other occupants and *can be even sprayed on food!***
- **There is no need to throw away your cardboard boxes as with other toxic products and hence it circumvents supply chain challenges many industries have been experiencing due to the pandemic.**

To Control the Corona Virus, a Proactive Disease Prevention Strategy is Needed - One That is Quick, Safe & Effective

Pest*nix* Approach to Disinfection

1. Pestinix prevention program starts with a **comprehensive, on-site inspection**, which we then use to design a specific treatment plan that helps meet your specific needs.
2. We will use **non-toxic disinfectants** to disinfect all high human contact surfaces such as counter tops, doorknobs, light switches, handrails, security machines, elevators, computers, key boards, phones, printers, ATM machines, toilets, water taps, cistern handles, sinks, toilets and vehicles/buses etc.
3. As second line of control and defense, we will spray **electrostatically charged mist in the premises and** on all high contact surfaces to inactivate any air-borne viruses.
4. **If you have a positive covid case, call us and we will disinfect your premises as per MOH, WHO & CDC guidelines.**

Pest*nix* we are your partners in preventing the entry, spread and control of Covid-19 in your premises for your protection. Contact us on: Tel:0714236788 / 0721341820
